✅ Planning

MoSCoW Requirements:

Must Have:

- Home page

- About Me page

- One embedded video

- One image

- A form with at least three input fields

- A table with a minimum of three columns

- An interview section with five questions

- Social media links

- A planning section

- A sitemap

- An overview and personal information about me

- Future projects section

- Separate HTML and CSS files

Should Have:

- Well-structured CSS layout

- Minimal use of `<div>` elements (only when necessary)

- A clear and functional header

- A footer for consistent navigation.

Could Have:

- A cohesive and visually appealing color palette

- A mobile-responsive design

- Thoughtful comments in the code for better readability and maintenance

Won't Have:

- Use of JavaScript to add dynamic features

- Integration of small games for entertainment purposes during browsing

Self feedback:

Based on my experience with this project, here's what I did well and will continue to apply in future projects:

- I thoroughly reviewed the project requirements.

- I outlined the key elements that I needed to focus on.

- I utilized ChatGPT to save time on research, such as learning how to create links and connect pages.

- I paid attention to selecting the appropriate colors for the website and how to ensure the colors complement the background.

Things I could improve on and will change in future projects:

- On some days, I spent the entire day working on styling a single element, while there were still other project priorities I had not completed.

- In future projects, I will ensure I meet the basic requirements and priorities first, then focus on secondary aspects like colors, measurements, and font

styling.

- I realized that certain tasks took longer than I initially allocated time for.

- Moving forward, I will be more mindful that some tasks may take longer than expected.

Weekly planning

Week 1:

- I read the project file carefully.

- I wrote down the key points.

- I prioritized my tasks using the MoSCoW method.

- I created a folder and organized my HTML and CSS files.

- I made wireframes to identify the pages I needed to work on.

Week 2:

- I created a sitemap.

- I learned how to start designing my project using W3Schools.

- I began working on the HTML for the homepage and the about me page.

Week 3:

- I created the CSS for the homepage and about me page.

- I designed the footer.

- I worked on the HTML for the projects and contact pages.

Week 4:

I didn't work much due to the holiday, but what I accomplished was:

- The CSS for the projects and contact pages.

- I added images and videos to the project.

Week 5:

- I made the final touches to the website.

- I validated the code.

- I added comments to my code to make it easier to read in the future.

- I submitted the project.
